**FOR IMMEDIATE RELEASE**

## **The ATV3000 now has wireless technology and a synthetic rope!**

(Tulsa, Oklahoma) Ramsey introduces the wireless remote - ATV3000 that is now even better! Not only does this hardworking winch include wireless technology, it is available with 50' of Technora synthetic rope and the Ramsey aluminum fairlead – making a great winch even better.

Synthetic rope is quickly becoming the standard for everyone from hardcore rockcrawling competitors to the weekend warrior off-road enthusiast. Synthetic rope has many advantages over wire cable including; safety, strength, and ease of use. And Ramsey is the first to introduce a wireless winch with the synthetic rope straight out of the box!

The ATV3000's efficient, powerful 0.9 hp motor has a pulling capacity of up to 3,000 lbs, faster line speed and 20% less AMP draw than the competitor's ATV winch. This means the ATV can be winched faster out of nearly any sticky situation and still have the power to start the engine when finished!

Other features of the ATV3000 include; weather resistant solenoid assembly, 3-stage planetary gear system for the fastest line speed, optional automatic load-holding brake for strength, a cam action clutch that disengages the planetary gear system for free spooling, and a machined aluminum hawse fairlead.

Not only does Ramsey take advantage of the latest and best technology available, we have a history of delivering consistent quality and performance.

*For over 60 years, Ramsey Winch has been a leader in the winch industry. Ramsey currently manufactures over 150 winch models for front mount self-recovery and industrial applications. Headquartered in Tulsa, Oklahoma, Ramsey Winch markets their products in more than 85 countries worldwide.*
